

Information for Trumpet Players

- Store mouthpiece in designated slot in case
- Open water key and blow through instrument to remove water – especially after playing
- Move all 4 slides back and forth periodically to prevent sticking
- Oil valves as needed (only 2-3 drops)
- If mouthpiece gets stuck bring to your music teacher –NEVER remove any stuck object with pliers
- Tiny dents in the casings can cause your valves not to move
- Wash your mouthpiece with a mouthpiece brush in lukewarm water and soap as needed
- Make sure you set your trumpet down with the 2nd valve slide pointing up to help prevent the 2nd valve from sticking
- Do NOT eat or drink before or while you play
- Send in once a year for maintenance
